Danishzuberi6@gmail.com
<https://www.linkedin.com/in/danish-mustafa-zuberi-5511a3178/>

OBJECTIVE:

Motivated Android Application Developer with hands-on experience in developing Android applications using Kotlin and Android Studio. Experienced in implementing payment and donation workflows, Bluetooth-based payment terminal integration, REST API integration, transaction handling, error handling, and application performance improvements. Also have experience in React.js and front-end development, with ongoing learning in DevOps technologies including Linux, Shell Scripting, Python, Git, GitHub, and cloud technologies. Passionate about building reliable, user-friendly applications and continuously improving technical skills.

EDUCATION:

- Bachelor of Engineering (BE) – Civil Engineering–All saints College of Technology, Bhopal

SKILLS:

- **Mobile Development** : Kotlin, Android Studio, Dart, Flutter
- **Development** : HTML, CSS, JavaScript, React.js, Bootstrap, Tailwind
- **DevOps & Cloud** : Linux, Shell Scripting, Python, Git, GitHub, and cloud technologies (Learning)

PROFESSIONAL EXPERIENCE:

Quasar Digital Solution Pvt Ltd, Bhopal, MP
Android Application Developer

Feb 2025 – Present

- Currently working on Al Taqwa, a donation application for an American-based client, using Kotlin and Android Studio.
- Developed and integrated Bluetooth-based payment terminal functionality for secure donation transactions.
- Implemented donation and payment workflows, including category selection, amount handling, and transaction processing.
- Integrated backend APIs for donation categories and payment transaction management.
- Worked on transaction handling, receipt of generation, error handling, and application performance improvements.

Orange Antelope, Bhopal, MP
Software Engineer

Apr 2024 – Feb 2025

- Currently working on a Learning Management System (LMS) for a Mumbai-based client, utilizing React.js and Bootstrap to build a responsive, user-friendly platform.
 - Contributed to developing interactive components and dynamic features to improve course navigation, student progress tracking, and content delivery.
 - Collaborated with cross-functional teams to integrate backend services and ensure seamless performance and scalability.
 - Developed React-based web applications utilizing HTML, CSS, and JavaScript to create responsive and visually appealing user interfaces.
 - Contributed to multiple projects, improving the overall user experience through UI improvements and bug fixes.
 - Gained hands-on experience in React development and worked on personal projects to further enhance skills in front-end technologies
-

PROJECTS:

Project: Al-Taqwa – Donation Application

Role: Android Application Developer

Team Size: 5 Members

Developed an Android-based donation application for an American-based client, focused on providing users with a simple and convenient platform for making charitable donations.

Designed and developed Android application screens and user interfaces using Kotlin and Android Studio, ensuring a clean, responsive, and user-friendly experience.

Implemented donation-related features to allow users to navigate through the application and complete the donation process smoothly.

Worked on payment and donation flow integration to provide a seamless and reliable experience for users making contributions through the application.

Integrated backend APIs to retrieve and submit application data, ensuring smooth communication between the Android application and server-side services.

Implemented user interactions and application logic according to the project requirements and business workflows.

Tested application features, identified bugs, and implemented fixes to improve application stability, functionality, and overall user experience.

Collaborated with team members and backend developers during development and integration activities to ensure smooth implementation of project requirements.

Project: Click to Clock – Employee Attendance Application

Role: Android Application Developer

Team Size: 3

Developed an Android-based employee attendance application used for recording and managing employee attendance.

Designed and implemented application screens using Kotlin and Android Studio, focusing on creating a simple and easy-to-use interface for employees.

Implemented the employee attendance marking functionality, enabling employees to record their attendance through the application.

Worked on application logic related to attendance workflows and ensured that attendance actions were processed correctly.

Integrated backend APIs to communicate attendance-related data between the Android application and server-side systems.

Implemented user interactions and navigation across different sections of the application to provide a smooth user experience.

Tested attendance-related features and application workflows to identify and resolve functional issues and improve application reliability.

Collaborated with team members during development, testing, debugging, and integration to ensure the application met the required business and attendance-management requirements.

Project: Masjid Management & Prayer Timing Application
Role: Android Application Developer
Team Size: 3

Developed an Android-based Masjid Management application designed to provide users with essential information related to daily prayers, Masjid activities, and Islamic content.

Designed and developed user-friendly Android interfaces for displaying daily prayer timings and other Masjid-related information using Kotlin and Android Studio.

Implemented prayer timing sections to allow users to easily view daily Salah timings and keep track of important prayer schedules.

Developed sections for displaying Islamic content, including Hadith and other relevant religious information, providing users with useful content within the application.

Implemented dynamic content display to ensure that prayer timings, Hadith, and other Masjid-related information could be presented in an organized and accessible manner.

Worked on application navigation and user interface components to provide a simple and intuitive experience for users accessing prayer and Masjid information.

Integrated backend services/APIs where required to retrieve and display application data and ensure smooth communication between the Android application and server-side systems.

Tested application functionality, identified bugs, and implemented fixes to improve application performance, stability, and overall user experience.

Collaborated with team members during development, testing, debugging, and feature integration to ensure the application met the required project specifications.

Project: Eleganza Estate Web Application
Role: Front-End Developer
Team Size: 5 members

- Collaborated as part of a 5-person team to build a dynamic web application for Eleganza Estate, a real estate company, using React to display property listings.
- Developed key front-end features to dynamically show building data, including property details (e.g., pricing, location, descriptions) and images based on static data.
- Designed an interactive and user-friendly interface, enabling visitors to browse and filter property listings based on various categories like price, location, and type.
- Implemented React components to create a modular, reusable, and maintainable structure for the application, ensuring a smooth and responsive user experience.
- Focused on responsive design to ensure the application was optimized for desktop, tablet, and mobile devices using CSS and/or Tailwind CSS.
- Worked closely with back-end developers to ensure smooth integration of static data into the front-end, providing a seamless experience for users browsing through properties.
- Tested and optimized the application for performance and responsiveness, ensuring quick load times and smooth transitions between pages using React Router and lazy loading techniques.
- Participated in team collaboration and agile workflows, contributing to design discussions and code reviews to maintain high development standards.

Project: IASC Government College Web Application**Role: Front-End Developer****Team Size: 2 members**

- Designed and developed the user interface for an online Learning Management System aimed at both students and teachers, ensuring a seamless, intuitive, and engaging user experience.
- Developed a React and Tailwind CSS-based web application for IASC Government College, in collaboration with another developer, to create an engaging, responsive, and user-friendly platform for students, faculty, and staff.
- Designed and implemented interactive UI components to facilitate smooth navigation, including dynamic sections like event announcements, course schedules, and faculty profiles
- • Ensured responsive design using Tailwind CSS, ensuring a consistent and mobile-friendly user experience across desktop, tablet, and mobile devices.
- Focused on performance optimization for fast load times and efficient user interactions.
- Worked closely with the project stakeholders to gather feedback and iteratively improve the design and functionality, ensuring the app met the needs of all users.

Project: Learning Management System (LMS)**Role: Front-End Developer (UI Design)****Team Size: 2 members**

- Collaborated with a 4-person development team to design and develop the user interface for an online Learning Management System (LMS), catering to both students and teachers.
- Designed and implemented interactive UI components, such as course navigation, video players, quiz interfaces, and user dashboards, using HTML, CSS, JavaScript, and React.
- Applied responsive design principles to ensure the platform provided seamless experience across desktop, tablet, and mobile devices, making it accessible and user-friendly on all platforms.
- Focused on UI/UX best practices, enhancing user engagement, ease of navigation, and overall usability to serve a diverse audience of students and teachers.
- Collaborated closely with back-end developers to integrate the front-end interface with server-side functionality, ensuring smooth data flow and interaction between users and the platform.
- Conducted usability testing and iterated on designs based on user feedback, continuously enhancing the system's accessibility and performance.
- Ensured cross-browser compatibility, optimizing the LMS for multiple browsers to maintain consistent user experience.
